

Health Care

Scan packaged food and instantly evaluate its health quality.

 ANDROID · KOTLIN

SHREENISH SHINDE

The Problem

Unreadable Labels

Ingredient lists are dense, technical, and nearly impossible to decode at a glance.

Hidden Harm

Consumers unknowingly purchase products loaded with additives, preservatives, and harmful fats.

No Quick Tool

There is no fast, reliable way to assess food quality right at the point of purchase.

Proposed Solution & Features

Health Scanner bridges the gap between complex labels and informed choices — in seconds.

Barcode Scanning

Powered by ZXing — instantly identify any packaged food product.

Real-Time Data

Fetches live ingredient and nutrition data via the Open Food Facts API.

Health Scoring

A rule-based algorithm evaluates ingredients and assigns a clear health score.

Explainability

Tells you *why* a product is rated good or bad — not just the score.

Technical Architecture

Android · Kotlin

Native Android app built with modern Kotlin architecture.

Firestore Auth

Secure login and signup for personalized experiences.

OkHttp + Open Food Facts

Efficient API calls pulling real product data at runtime.

ZXing Library

Fast, reliable barcode scanning integrated into the camera flow.

UI/UX Showcase

A clean, minimal interface designed to deliver results in three taps.

Login Screen

Firebase-powered auth with a minimal sign-in flow.

Scanner Screen

Live camera view with ZXing barcode detection overlay.

Result Screen

Score, category, and full ingredient breakdown — clearly explained.

Conclusion & Future Scope

✓ Today

Empowers users to make smarter, healthier food choices — instantly at the shelf.

🤖 Tomorrow

AI-based scoring, personalized dietary recommendations, and cloud-synced user history.

🚀 Potential

Strong commercial viability as a health-tech product or white-label solution for food brands.
